HeliFlow® Industrial Series

Positive Displacement Blowers & Vacuum Pumps

GARDNER DENVER™

Experience Proven Results™

GD HeliFlow®
Built By the Industry Leaders

GD HeliFlow

HeliFlow integrates proven experience with blower design and manufacturing techniques to create an innovative helical tri-lobe blower. Gardner Denver has created a low noise solution for positive displacement blower and vacuum pump applications.

Gardner Denver

– Tradition

– Quality

– Innovation

– Results

Quality + Tradition = Trust

- Tradition: quality manufacturing with proven results since 1859
- Every HeliFlow is machined, assembled and packaged in our state-of-the-art 330,000 sq. ft. ISO 9001 Certified facility in Sedalia, Missouri
- Each HeliFlow is individually tested to meet rigorous performance specifications
- Superior and consistent quality can be found in each HeliFlow as a result of:
  - Continual investment in the training of world-class manufacturing personnel
  - Advanced Flexible Machining Systems (FMS)
  - Quality inspections throughout the entire manufacturing process
- The HeliFlow Warranty
  - 30 months from the date of shipment or
  - 24 months from the date of installation, whichever occurs first

Model 412

HeliFlow Provides

– Pressure to 15 psig

– Vacuum to 17" Hg

– Airflow to 3200 cfm

– 24/30 Warranty

Model 616

Innovation

- Solid, helical tri-lobe rotors
  - Eliminate the potential for unbalanced rotors caused by build-up of ingested material inside the impellers
- Greater durability with an increased capacity for overhung load
- Refined timing and locking device incorporates a frictional keyless shaft gear locking ring
  - Improves blower life
  - Provides an easily adjustable and releasable mechanical shrink fit on timing gears
  - Allows for easier maintenance
- Advanced piston ring air and oil seals for a dependable supply of oil-free air
- Spherical roller bearings
  - Better for misalignment and longevity

Results

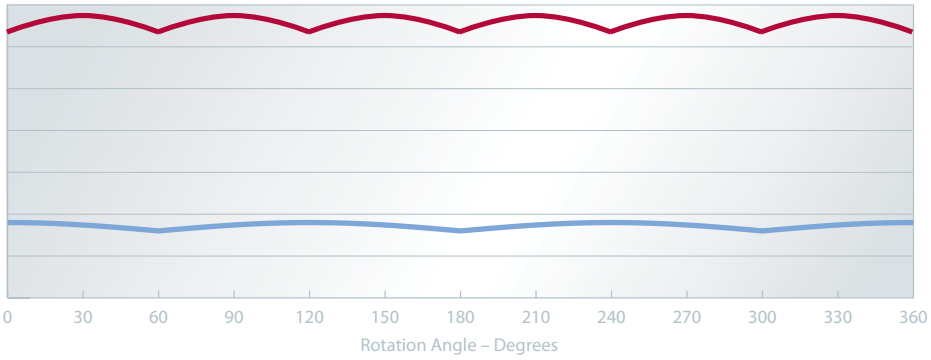
- Overhung load limit of 13,500 in-lbs vs. competition of less than 7,999 in-lbs
- Reduced noise levels by 4–7 dba over similar sized, straight-lobe blowers
- Lower pulsations to protect downstream instrumentation and extend blower life
- HeliFlow 624 vs. competitive units
  - Greater temperature rise limits across the blower—250° F vs. 230° F
  - Increased pressure capability—12 psig vs. 10 psig
- Single-piece case with integral fins
  - Results in superior structural integrity and minimal torsional twist
  - Provides better heat dissipation to help maintain clearances
- Helical gears for quieter operation (616 and 624)
- Supported by a worldwide network of experienced and trusted sales and service professionals

HeliFlow is Innovation

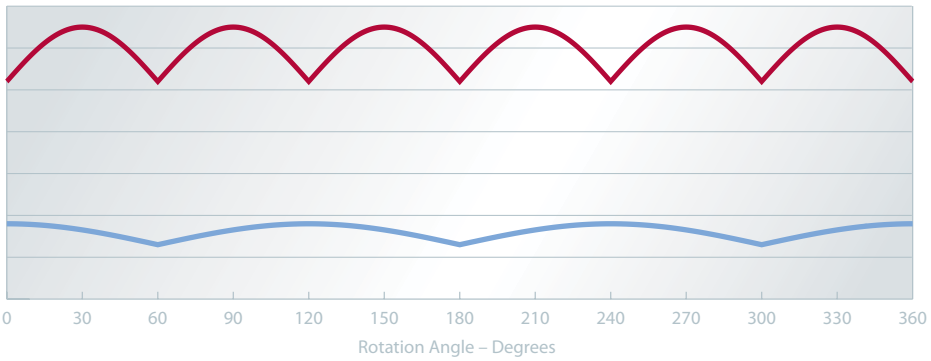
Product Design	HeliFlow 514 & 616 & 624	Competitor A	Competitor B	HeliFlow Advantages
Cylinder & Rib Design	One piece with integral ribs	One piece without ribs	One piece without ribs	• Noise & pulsation dampening • Improves heat dissipation • Reduces stress on cylinder • Ensures better tip clearance accuracy
Drive/Gear End Bearings	Spherical roller	Cylindrical roller (drive) Double row ball (gear)	Cylindrical roller	• Increases bearing life • Better equipped to handle radial & axial loads commonly caused by misaligned V-belt drives
Gear Type	Helical	Helical	Spur	• Quiet & smooth mechanical operation • Reduces backlash • Allows tighter clearances
Gear Attachments	Grip rings	Keyed interference fit	Taper gear fit	• Improves reliability and eliminates timing loss • Easier to rebuild • Easily adjustable and release-able mechanical shrink fit
Rotor Profile	Solid, Helical Tri-Lobe	Hollow, Dual-Lobe	Hollow, Dual-Lobe	• Reduces noise and pulsations • Improves blower life • Eliminates the potential for unbalanced rotors due to product contamination
Oil Seals	Two piston ring seals with slinger and groove	Lip seal	Lip seal	• Superior oil sealing • Dependable supply of oil-free air • Extends maintenance intervals
Max. Overhung Limit (in-lbs)	514 = 8100 616/624 = 13500	3200 <7999	1600 <7999	• More resistant to overhung loads • Will ***not*** require a jack shaft at higher HP
Pressure Capability (psig)	514 = 15 624 = 12	10 10	13 10	• Increased pressure capability
Temperature Rise Limits (deg. F)	624 = 250	230	230	• Improved ability to withstand extreme operating conditions
Approximate Weight (lbs)	514 = 667 616 = 865 624 = 1145	410 650 775	615 650 775	• Extra cylinder mass for reduced noise and pulsations • More robust design

HeliFlow: Lower Pulsation & Noise Levels

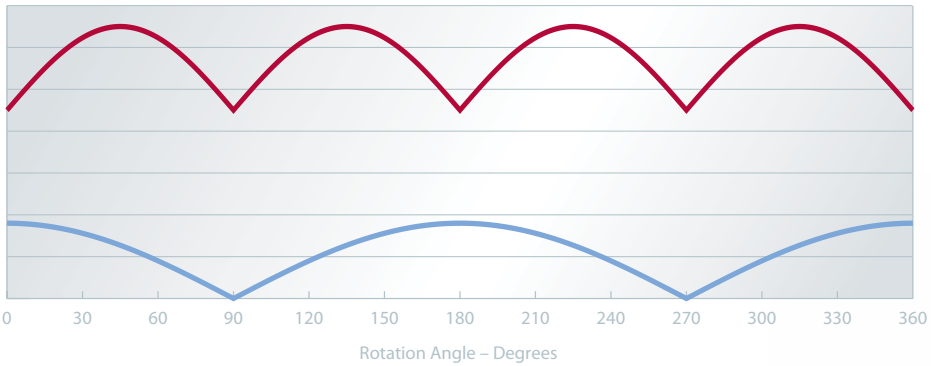
HeliFlow Low Pulse, Helical Tri-Lobe Blower



Typical Tri-Lobe Blower



Typical Dual-Lobe Blower



Change in Torque

Change in Flow

Lower Noise

Discharge pulsation is the chief contributor to high noise levels. HeliFlow provides the lowest pressure pulse which reduces noise levels by 4–7 dba over similar sized, straight-lobe blowers.

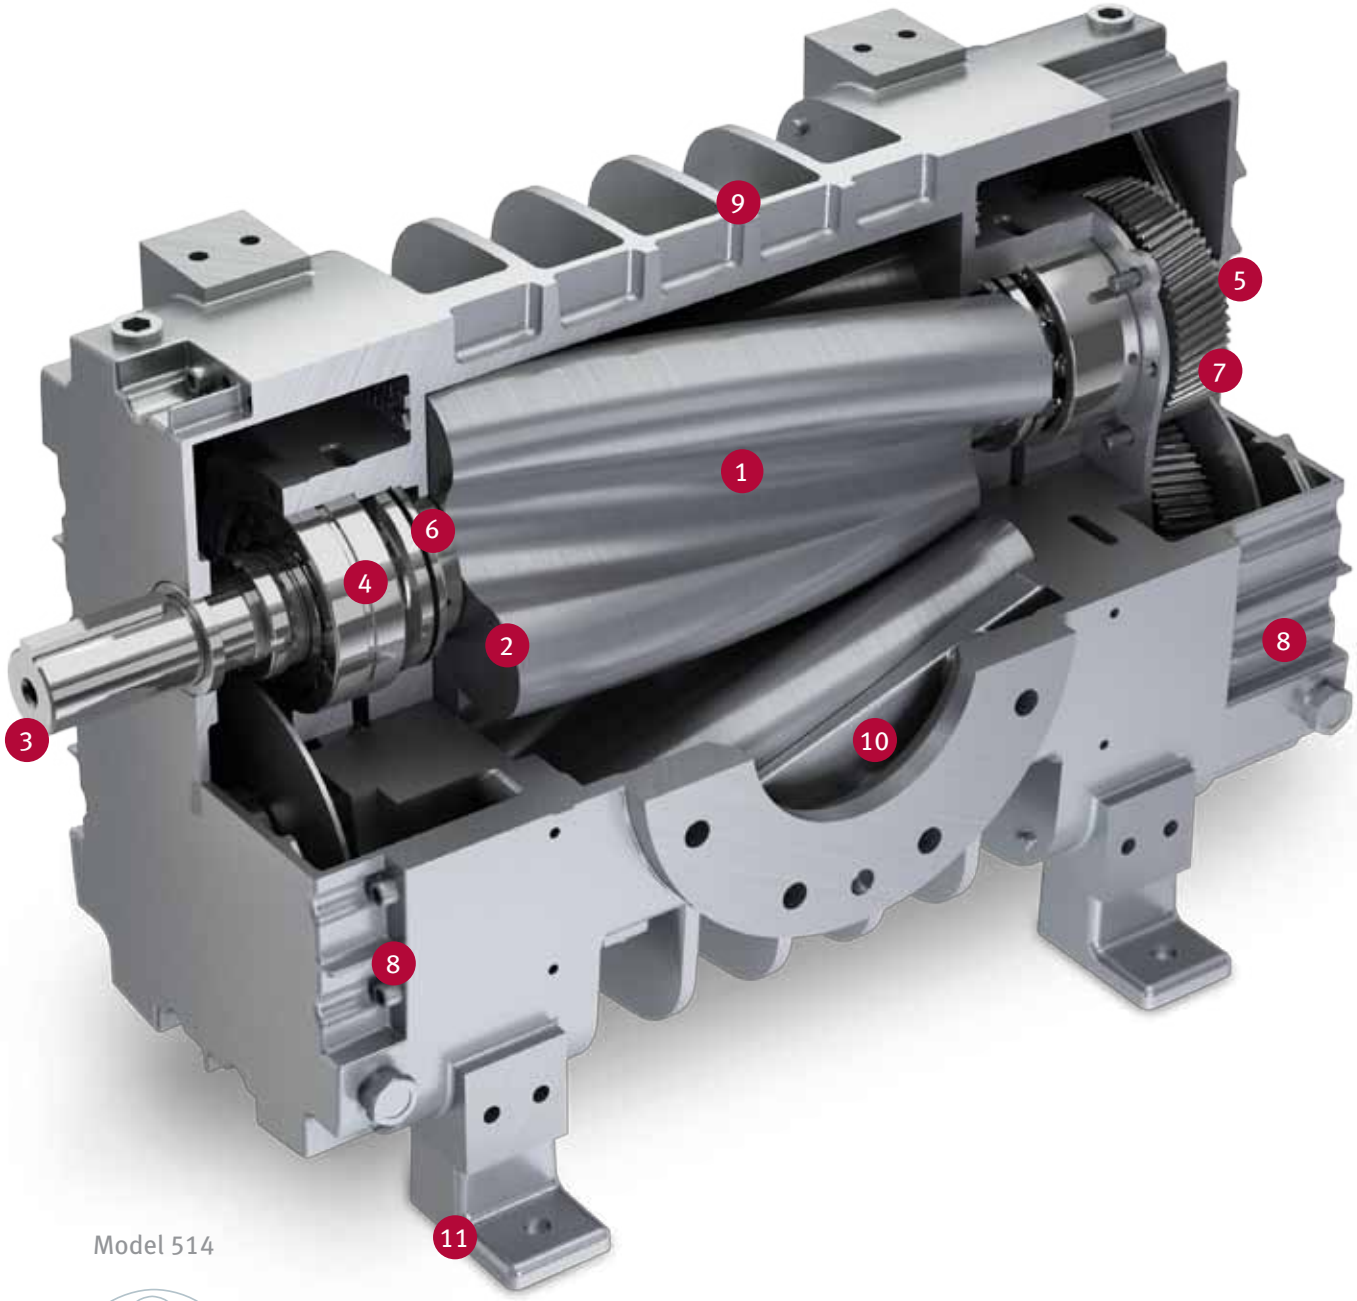
Reduced Pulsations

HeliFlow provides more consistent flow variation, reducing the potential for damage to downstream valves and instrumentation.

Higher Reliability

Discharge pressure pulsation causes axial thrust and higher variations in torque resulting in reduced bearing life. The HeliFlow smooth pulse operation extends the life of the blower.

Raising the Bar Through Innovation



Model 514

HeliFlow Design Advantages

1. Innovative, proprietary, smooth-running, helical rotor profile significantly reduces pulsations and discharge noise levels for quieter operation

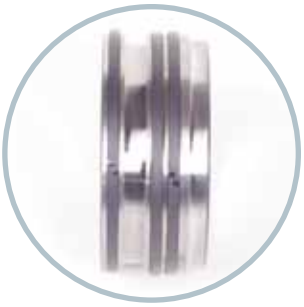
2. Solid rotor design eliminates the potential for vibration caused when hollow rotors become unbalanced due to build-up of ingested material inside the rotor cavities
   - Rotors and shafts are machined from high-strength ductile iron and are dynamically balanced to ISO Grade 6.3 as standard

3. Large diameter shafts provide superior overhung load capacity compared to competitive models

4. Oversized spherical roller bearings for superior reliability
   - Precision fit bearings mounted on large diameter shafts provide longer blower service life

5. Refined timing and gear locking device
   - Grip rings expand against the bore of the gear and compress on the shaft for a secure, mechanical shrink fit

6. Advanced piston ring oil and air seals provide leak-free operation
   - 1 air and 2 oil seals



7. Helical alloy steel timing gears provide quiet and smooth mechanical operation at all speeds

8. Dual splash lubrication for reduced maintenance intervals and superior durability

9. The single piece cylinder incorporates large external fins for heat dissipation and structural integrity

10. The unique triangular tuned ports and extra cylinder mass provides greater strength and noise attenuation

11. Flexible design allows mounting feet to be attached inward or outward based on installation requirements
    - Offers the ability to connect units in a variety of configurations
